Application/Control Number: 09/882,123

Art Unit: 1761

Claims 2-4,6-9,11-18 and 20-21 are rejected under 35 U.S.C. 112, first paragraph, because the specification, while being enabling for sago and potato starch, does not reasonably provide enablement for any amylose-containing starch. The specification does not enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to carry out the invention commensurate in scope with these claims.

Applicant claims a process of making a dough by adding to the dough an amylose-containing starch; this starch has specific properties and give the dough specific properties. The specification shows that only sago and potato starch give the properties claimed; yet the claims encompass all amylose-containing starch. The claims are not enabling for any amylose-containing starch because only sago and potato starch give the properties claimed.

Claim 21 is rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

The limitation in claim 21 is not supported by the original disclosure. The specification does not disclose the dough is a low fat dough.

Claims 2-21 define over the prior art because applicant's argument is found to be persuasive.
